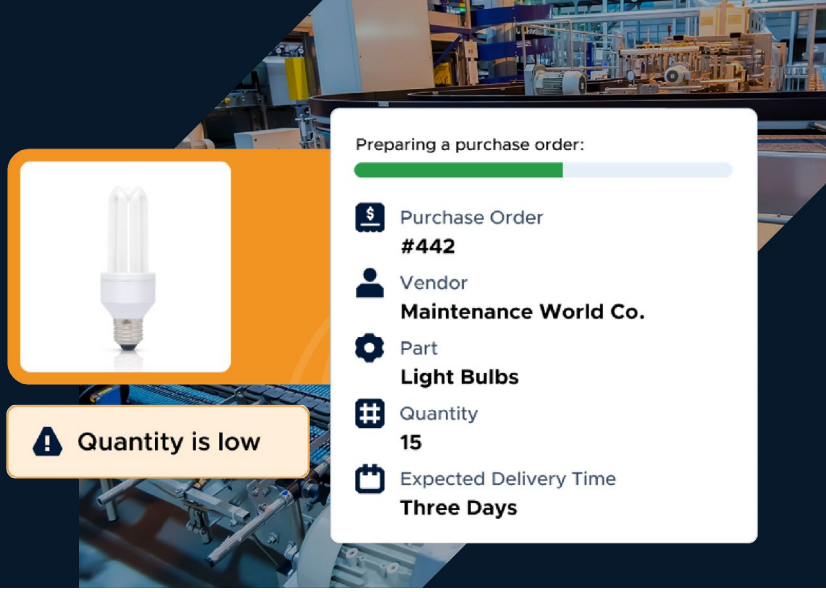
Limble

Limble + Microsoft Dynamics 365 Business Central



Built for Maintenance, Synced for Business

Microsoft Dynamics 365 Business Central drives finance and operations. Limble CMMS drives maintenance. Together, they connect the floor and the front office—creating a single, accurate flow of information that eliminates manual work and keeps every team aligned.

Many organizations rely on Business Central as their financial backbone, but it wasn't designed for day-to-day maintenance. Limble fills that gap with a technician-first CMMS that's easy to use in the field and powerful enough to sync directly with Business Central in real time.

Why It Matters

Disconnected maintenance and finance systems slow teams down. Duplicate data entry leads to errors, delays, and poor visibility into costs and inventory. The Limble + Business Central integration solves this by syncing work orders, part usage, purchase requests, and vendor details automatically.

Key Benefits

- Cut administrative time by removing duplicate purchase order entry and manual updates.
- Maintain accurate cost tracking by syncing parts, line items, and PO costs straight into Business Central.
- Reduce emergency orders and rush fees with real-time inventory data and automated reorder triggers.
- Keep vendor and financial records consistent with automatic data flow between maintenance and accounting.
- Improve technician wrench time—techs create purchase requests directly from Limble without switching systems.
- Right-size inventory by using Limble's parts usage insights to inform reorder points in Business Central.

How It Works

1. Technicians log a low-stock part or create a purchase request in Limble.
2. Limble automatically generates a detailed purchase order in Business Central.
3. Vendor, part, and cost data sync in real time between both systems.
4. Finance and procurement teams approve and manage spend in Business Central.
5. Maintenance teams continue working in Limble—the system designed for their workflow.

The Result

Faster purchasing cycles and fewer delays.

Clear visibility into maintenance costs and inventory value.

Finance and maintenance teams working from the same accurate data.

Built for Maintenance. Trusted by Finance.

Limble CMMS and Microsoft Dynamics 365 Business Central work better together—delivering a connected, accurate, and efficient operation from the floor to the finance office.

Limble

Limble is an award-winning enterprise maintenance management platform that empowers maintenance professionals and operations executives with a seamless digital interface to perform and review all operations and analytics across the maintenance lifecycle.
